MUHANNED ALSORADI

Flutter Mobile Developer | Computer Systems Engineering Student

Gaza, Palestine | +972 598191753 | muhannedalsoradi@gmail.com

LinkedIn • GitHub

PROFILE

Computer Systems Engineering student (expected graduation October 2026) and Flutter developer with hands-on experience building and shipping multiple production-oriented mobile applications end to end — from UI/UX in Figma through state management, backend integration, and offline-first data handling. Completed a hands-on internship at the Palestinian Federation of Industries building two independent Flutter applications. Built and defended a graduation project for managing displacement camp operations, and ships a commercial financial solution used by shops and merchants in Gaza. Comfortable working across Cubit/BLoC, cloud and local databases, and REST APIs, and experienced collaborating through Git.

TECHNICAL SKILLS

- **Mobile Development:** Flutter & Dart (mobile & desktop), Cubit/BLoC state management, offline-first data (SQLite/Hive), REST API integration
- **Programming Languages:** C/C++, Python, Java, Assembly, SQL
- **Tools & Platforms:** Git/GitHub, Android Studio, VS Code, Figma, Firebase, Cloudinary
- **Practices:** Role-based access control, offline-first architecture, PDF report generation, push notification systems

EXPERIENCE

Mobile Development Intern (Flutter) | *Palestinian Federation of Industries (PFI) — UNDP/UNIDO-Supported Program*

- Completed a 195-hour hands-on internship, independently designing and building two full mobile applications from scratch under the supervision of Eng. Tamer Al-Jabali.
- Built a damage claim tracking application featuring OTP-based authentication and REST API integration for submitting and monitoring claims.
- Built a field survey application integrating Google Maps for geolocation-based data collection, with local persistence via SQLite and Cubit/BLoC for state management.
- Reference: Eng. Tamer Al-Jabali, Engineer, Palestinian Federation of Industries — internship supervisor.

PROJECTS

DCMS — Displacement Camp Management System ("DCMS / مأوى") — *Graduation Project · Flutter*

- Designed and built a full-scale mobile system for managing displacement camp operations, supporting three distinct user roles: Admin, Volunteer, and IDP (displaced person).
- Architected the app using Cubit/BLoC with a cloud backend for authentication and real-time data, and moved media storage to Cloudinary for more reliable image handling.
- Implemented a real-time notifications system using a dedicated database collection with per-user filtering.
- Built PDF report generation with proper Arabic font rendering (Cairo), and role-aware shared UI components across the app.
- Delivered full project documentation (Implementation chapter), a 17-slide project presentation, and a live demo video as part of the final submission.

Wathiq (وثيق) — Financial Management Solution for Shops & Merchants — *Commercial Project · Flutter, SQLite*

- Built a digital solution for managing the finances of shops and merchants in Gaza, running on both phone and laptop and designed to work reliably offline.
- Implemented incoming/outgoing transfer management, customer and supplier accounts, bank and cash accounts with auto-updating balances, and per-client feature flags.
- Built bank reconciliation, styled Excel export with filters, backup/restore, and a device-based activation system (3-day free trial, then a lifetime license).

RexSouq — Gaming E-Commerce App — *Personal Project · Flutter, Figma*

- Built a cross-platform (Android & iOS) e-commerce app for gaming products, designed end-to-end in Figma before implementation.
- Implemented multi-item purchasing, coupons and discounts, and multiple payment methods including PayPal, STC Pay, Visa, Mastercard, Mada, and Apple Pay.

Tahfeez — Quran Memorization Tracking System — *Personal Project · Flutter*

- Built an integrated system for managing Quranic memorization circles across mosques in the Gaza Strip.
- Enabled guardians to track a student's memorization progress against a monthly plan, including daily output and behavioral records.

EDUCATION

Bachelor of Computer Systems Engineering | *Al-Azhar University — Gaza, Palestine* Expected: October 2026

SOFT SKILLS

- Problem Solving: Skilled at debugging both software and hardware issues.
- Fast Learner: Stays current with emerging mobile technologies and frameworks.
- Teamwork: Experienced collaborating through Git-based version control workflows.

LANGUAGES

Arabic: Native **English:** Very Good (Technical Proficiency)
